Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1-4 and 7-8 have been amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in the Final Office action.

EP 0 896 043 is considered to be the closest prior art of record. However, EP '043 does not suggest the specific combination of initiators in the parts by mass set forth in the instant claims and the unexpected results documented by the comparative data in the instant specification. The comparative data presented in the instant specification provides evidence of unexpected results when all four components of the photoinitiator system are present within the amounts set forth in the instant claims. Improved hardness and bending strength shown in Tables 4-6. The unexpected results are obtained when the photopolymerization initiator comprises each of the four components set forth in the instant claims in combination and the composition comprises ethylenically unsaturated monomers as the polymerizable monomers, as set forth in the amended claims.

The following references teach photopolymerization initiators for dental compositions comprising α -diketones used with amines or s-triazines having trihalomethyl substituents. However, the references do not disclose or suggest the instantly claimed mixture of amines in combination with an α -diketones and an s-triazine having trihalomethyl substituents. See US 6,387,981, US 6,899,948, US 6,528,555, US 5,545,676 and US 6,759,449.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
